

South Carolina
Department of Transportation

MEMORANDUM

194002

J.V. Walsh
TO: Ms. Colanthia B. Alvarez, Administrative Coordinator 1
FROM: John V. Walsh, Chief Engineer for Planning, Location, and Design
DATE: July 14, 2008
RE: South Carolina Electric & Gas Company's (SCE&G) Combined Application for a Certificate of Environmental Compatibility and Public Convenience and Necessity and for a Base Load Review Order for a proposed Nuclear Facility at Jenkinsville, South Carolina

Thank you for the opportunity to comment on the above referenced expansion, Docket Number 2008-196-E.

We have two comments on the proposed expansion:

- **Reference Item #8 – Anticipated Construction Schedule**
South Carolina Department of Transportation's (SCDOT) primary concern stemming from construction activities would be safety issues associated with increased truck traffic and potential damage to the roadways from overloaded trucks. Continued partnership and coordination with SCDOT, as well as South Carolina Department of Public Safety (SCDPS) regarding anticipated truck traffic and construction schedules would be most helpful in addressing these concerns.
- **Reference Item #25 – Transmission Interconnection Studies**
SCE&G's coordination between SCDOT's Utilities Office, the Regional Production Group 3 Engineer (regarding programmed/STIP projects), and the Director of Planning & Environmental (with regard to long range plans) would be beneficial in selecting an optimum adjustment in the route or routing of these transmission lines with regard to both planned transportation improvements and the associated development.

Thank you again for this opportunity to comment on the proposed expansion. If you need any additional information from SCDOT, please contact the Director of Planning and Environmental Ron Patton at 803-737-1446.
